SUMMARY

QA tester with almost 4 years in quality assurance, including 3.5 years testing software for insurance, retail and e-commerce businesses. I run user acceptance, functional, regression, end-to-end and API tests, write test cases traced to requirements, and report defects with clear steps and evidence. I also automate key checks with Playwright and TypeScript and run them in GitHub Actions, and use AI tools such as Claude to design tests, build automation and investigate bugs faster, verifying every result myself.

SKILLS

Testing	UAT, functional, regression, end-to-end, API, cross-browser, responsive, compatibility, role-based access
QA documents	Test plans, test cases, requirements traceability, defect reports with evidence, daily QA reports
Automation	Playwright, TypeScript, GitHub Actions, Git and GitHub
AI tools	Claude for AI-assisted test design, automation and debugging
API and data	Postman, SQL
Tools	Jira, Zoho BugTracker, LambdaTest, CICS, Microsoft 365
Ways of working	Agile / Scrum, working closely with developers

WORK EXPERIENCE

Quality Assurance Tester
Jun 2026 – Oct 2026

PJ Lhuillier, Inc.

- Ran user acceptance testing (UAT) on an inventory forecasting and ordering system.
- Wrote and executed test cases, and kept a traceability matrix linking each requirement to its tests.
- Kept the defect log, recording each defect with steps to reproduce and evidence.
- Automated key user flows with Playwright end-to-end tests.
- Tested role-based access, confirming each user role could see and do only what it should.
- Verified forecast and order data in the database with SQL queries.

Tools: Playwright, SQL

Junior User Acceptance Tester
Jan 2025 – May 2026

Nityo Infotech, deployed to BPI-Philam Life (Jan 2025 – Feb 2026) · Alabang, Muntinlupa

- Performed end-to-end and functional user acceptance testing on BPI-Philam Life's insurance systems.
- Created and executed test cases, including tests in CICS and the user management system.
- Documented defects with clear steps to reproduce and reported them to the development team.
- Coordinated with developers on fixes and retested them.

Tools: CICS (Customer Information Control System), user management system, Microsoft 365

Software QA Tester
Aug 2023 – Dec 2024

OptimizeX/Primeview · Alabang, Muntinlupa

- Tested WordPress and Shopify websites end to end, on both test and live sites.
- Ran functional, compatibility, responsive and cross-browser tests across browsers and devices with LambdaTest.
- Logged and tracked bugs in Zoho BugTracker.
- Monitored the sites daily, sent daily QA reports, and worked with developers in daily scrum meetings.

Tools: WordPress, Shopify, LambdaTest, Zoho BugTracker

Software QA Analyst, Manual (Level 2) Apr 2022 – Nov 2022

Seven Seven Global Services Inc. · Pasig City

- Wrote test cases from user stories.
- Ran functional and regression testing in UAT and production environments.
- Tested APIs with Postman, checking responses and status codes.
- Worked in an Agile team with daily stand-ups and scrum meetings, coordinating with developers.

Tools: Jira, Postman, the client's internal tools

Quality Assurance Tester Oct 2021 – Dec 2021

Q2 HR Solutions, deployed to Smartmatic · Santa Rosa, Laguna · 2-month project contract

- Wrote and executed test cases to check products on a factory production line.
- Recorded results and reported defects and issues; supported production tasks when needed.

Tools: Linux, spreadsheets

EARLIER EXPERIENCE

Onsite Support Engineer · STMicroelectronics, LISP2, Calamba, Laguna May 2021 – Aug 2021

Desktop and helpdesk support, ticket management and server maintenance.

Intern · TESDA Complex, Taguig City Apr 2017 – Jun 2017

Set up and troubleshot computer hardware, software, networks and peripherals.

PROJECTS

mirou matcha: website and QA case study 2026

- Built and published an ordering website for a home-based matcha business: dionanthonyflores-prog.github.io/mirou-matcha
- Wrote a test plan and 54 automated test cases in Playwright and TypeScript, traced to 16 requirements and run on desktop, Android and iPhone.
- Set up GitHub Actions to run every test on each update and publish the site only when all of them pass.
- Built it with Claude as an AI coding assistant: I directed the work, reviewed every change and verified it with tests.
- Questioned an order limit with the owner, then handled the change request through code, tests and docs.
- Found, fixed and documented 7 real bugs with before/after evidence, 2 of them by manual testing on a real phone: QA case study

mirou matcha order tracker: private web app with a database 2026

- Gathered 12 requirements from the owner and wrote acceptance criteria for each, linked to their tests.
- Built a private order tracker with a login and a PostgreSQL database secured with row-level security.
- Tested security against the live database: without logging in, reading, adding, changing or deleting orders is refused.
- Wrote 13 unit tests and 26 Playwright end-to-end tests (desktop, Android, iPhone); 7 deliberate bugs put in to check the tests were all caught: live demo

EDUCATION

Bachelor of Science in Computer Science 2014 – 2018

Colegio de San Juan de Letran Calamba
